

Brodie International AT A GLANCE

History

Brodie International will celebrate our 80th anniversary in 2009. Our long and storied path to today was started by Ralph Brodie, whose desire was to provide high precision measurement devices for petroleum markets. Since then Brodie has constantly led the industry in the creation of innovative new products and solutions. The BiRotor series of meters, including the BiRotor Plus electronic version and Brodie's industry-leading Savmor marketing terminal program are all examples of the continuing development and evolution of Brodie's technical acumen.

Overview

Today Brodie International continues with the tradition of providing world class fiscal measurement solutions to the petroleum market. We are now a global organization covering all regions of the world answering the needs of our clients. Brodie leads the industry in providing the most accurate and reliable measurement solutions through the BiRotor series of meters and the TruAct control valves. We focus on creating partnerships with our clients to jointly define the best solutions to the industry challenges.

Industries

Brodie International products and services are used by a broad petroleum customer base, including being industry leaders in:

- Upstream Oil & Liquefied Gas
- Refining
- Downstream Distribution
- Pipeline
- Aviation

Applications

Brodie International provides the following types of applications to the industries we serve:

- Marketing Terminal operations including blending
- Pipeline custody transfer
- Master Metering
- Engineered Systems
- Fuels Management
