

**Sound Engineering Practice Statement
Pressure Equipment Directive 97/23/EC
No: BID SEP Rev. C**

Classification of Pressure Equipment

Brodie International products, defined as pressure equipment (pressure accessories) with respect to the Pressure Equipment Directive 97/23/EC, have been classified in accordance with Article 9, Classification of Pressure Equipment. Products that are below or equal to the limits in Article 3, sections 1.1, 1.2, 1.3 and 2 must be designed and manufactured in accordance with sound engineering practice. The Commission's Working Group "pressure" guideline 9/19 indicates, while a EC Declaration of Conformity cannot be drawn up, a statement may be provided that indicates sound engineering practice requirements have been met. The listed Brodie International products on the next page are classified as designed and manufactured to sound engineering practice.

Conformity Assessment

Pressure Equipment Directive, Article 10, conformity assessment does not include a category and associated procedures for sound engineering practice. Brodie International products that were classified and a subsequent PED category assigned are assessed in accordance with Module H. Brodie International has one universal quality system that has been determined to comply with Module H by the Notified Body (BSI) for the categorized products. All Brodie International PED CE marked products and those products that are not marked, *SEP* are designed and manufactured to the same assessment procedures.

This information is respectfully presented to indicate that all Brodie International products have been evaluated and the listed products are solely classified as sound engineering practice.
