Antwerp, Belgium (March 30, 2010) – Brodie International is pleased to announce the formal release of their 2" BiRotor *Plus* designed for ethanol blending. Brodie International first unveiled its new ethanol blending meter to the market in late 2009. This 2" single case meter provides unsurpassed performance in ethanol blending applications and has met or surpassed all global measurement, electrical and pressure requirements.

To meet stringent blending ratios in the production of Bio Fuels, Brodie International has developed a "Low Cv" cylinder option for their 2" Digital Control Valve. This ensures that the blend ratio remains consistent throughout the load. When used in conjunction with their new ethanol blending meter, this offers an unbeatable combination of repeatability and linear flow control.

Customers experienced in Brodie's superior performance, accuracy, and repeatability, not to mention the durability of the double case BiRotor *Plus* Family of meters, are taking full advantage of this unique combination to enhance the performance of their blending operations. Tom Clark, Brodie International's CEO commented, "We can offer the industry the performance they have come to expect in our Family of BiRotor *Plus* Meters, at a single case price." Henry Webster Vice President of Business Development also noted, "We feel that our new meter has the potential to be a game changer in the ethanol blending market for years to come. In fact, the initial enthusiasm from our initial production release has prompted us to accelerate our production capabilities to keep up with demand."
